ECOL 501 Course Learning Outcomes

At the end of this course, successful students are expected to be able to:

1) Compile and organize raw data into a form appropriate for analysis
2) Generate predictions regarding pattern and process in ecology and evolution
3) Perform appropriate analyses given a question in ecology and/or evolution
2) Extract meaningful insights from data analysis
3) Communicate how results from an analysis integrate into a larger research question relevant to ecology and/or evolution.
