At the end of this course you will be expected to:

1. Describe the anatomical systems of vertebrates and their interactions
2. Explain the organismal function of anatomical systems
3. Identify the anatomical structures of vertebrates
4. Compare anatomical differences among major clades of vertebrates
5. Explain the embryonic and evolutionary origin of anatomical structures
6. Predict the 3D relationships of structures based on 2D sections
7. Communicate effectively orally and in writing using appropriate terminology
